ABSTRACT

The GDP (gross domestic product) will affect our country level and quality that may change our life style because the high-technique product enters our daily life every a second. We should appreciate the engineers and experts to take out new technology for us to share due to combining many high-techniques software skill to make the complete product more advancement and industrialization that may destroy the traditional economy eventually. The renewable energy like photovoltaic generator, wind turbine one, nuclear generator, hydrogen fuel & carbon one etc. new source one will be exploited by us continually to exhibit its power in front of public. On the other hand, the heat-supplier will be regulated by one house in a building with increasing and decreasing button completing electric releasing role. In the developed country it is essential function, so if you go out to let the heat decrease and when you turn back making it to increase room temperature for the sake of maintaining a normal situation in winter. Thereby, the electric consumption will retain in a high level and capacity. The new electric generator may be used from the nature renewable source with green and low carbon fuel atmosphere like photo, wind, nuclear pile, hydraulic & carbon one. Thereby, the high GDP is about to be created by our continual endeavour with those renewable resource and following machinery making course by our scientist & engineers. Hence, the entire industrial chains and supplied chain special in those down-stream firms because they will assemble all the supplied parts to one mature & complete equipment to transfer all the necessary places like sand dune, seaside & hills. With increasing those equipment by factory the employment-rate is to be incremented largely whose role can exhibit in the entire new energy transformation ratio. At end, the goods will be created large volume to transport other nations so as to increment the foreign trade activities for the sake of transforming into the foreign dollars with more capital reserve which can buy the essential goods lacking of producing in domestic market necessarily. In the end, the educated talents like university graduates will be recruited to work in different divisions in order to communicate each other experiences to reach a good circulation which can help companies to finish the useful advice transformation and adopt new innovation ones sustainably.

KEY WORDS: Reviving the Inner Mongolia GDP analysis, Israel & Hebei etc. province GDP analysis Changes, by sustainability, an innovated searching

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R & D dept(research & development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~20]

2. Discussions

2.1 Inner Mongolia GDP analysis

The Inner Mongolia cities GDP might show 16~23 billion yuan by Huhhot~Baotou cities correspondingly in 1998 according to the Figure 1 to indicate latter Baotou strong economic momentum while the Chifeng city remained the least 13.8 billion yuan.

Figure 1 The Inner Mongolia cities GDP. [1]

Furthermore, the Inner Mongolia cities GDP might show 18%~10% by Huhhot~Baotou cities correspondingly in 1998 according to the Figure 1 to indicate Huhhot strong economic developed pace while the Chifeng city remained the least 6%.

Figure 2 The Inner Mongolia cities GDP y-y. [1]

2.2 Israel & Hebei etc province GDP analysis

The Israel & Hebei province GDP analysis would indicate 3.2~26 billion dollars by Hebei~Israel correspondingly in 1981 according to the Figure 3 to express the latter Israel forwards economic momentum.

Figure 3 Israel & Hebei province GDP analysis. [2]

The Israel & Hebei province GDP analysis would indicate 2.9~22 billion dollars by Hebei~Israel correspondingly in 1979 according to

the Figure 4 to express the latter Israel forwards economic momentum.

Figure 4 Israel & Hebei province GDP analysis I. [2]

The Israel & Hebei province GDP y-y value analysis would indicate 5.2%~9% by Hebei~Israel correspondingly in 1981 according to the Figure 5 to express the latter Israel forwards economic pace, additionally the Shandong province attained 16% with the fastest pace.

Figure 5 Israel & Hebei province GDP y-y analysis I. [2]

2.3 Introduction to the Journal of Physics Nexus: Theory & Innovation

As for Doctor & researchers, the greeting from the journal will be sent by us. The Journal of Physics Nexus with Theory & Innovation invites submissions of PPT presentations and video articles for its upcoming issue. We welcome innovative contributions in theoretical and applied physics, emerging technologies, and interdisciplinary research. Thereby, we delight that you submit your precious article to our journal for contributing to both of us quickly. The paper will be publishing after our peer-reviewed course immediately. [3]

2.4 Stocks changes

The ones for recommending is to be the <Mosu Tech> with 000700, <Defang Nano> with 300769 on July 1, 2026. [4] Another three will indicate the <Bomin Electron> with 603936, <Dexin Tech> with 603032 & <Xinheng Hui> with 301678. Moreover, the ones for free welfare include in the following <Furi holds> with 002083, <Longpan Tech> with 603906, <Li Anlong> with 300596. [5]

In the summary, the reasonable population who had a good education in school and university will create the high-technique upward dynamic in later company life for creating research and development capacity continually. We should carefully cultivate their education with experiment and theoretical deduction to solve

some easy and middle difficult mathematical modeling and simulation defined a certain condition by some parameters that may be regulated variation ones to gain the a series of achievement with regards to the each aspect matter. We also should educate the graduate to write the thesis papers with bachelor, master & PhD degree that may be a best proof to process the simulation and subsidiary experiment if possible. Then he may widen the views that may bring out the new vision to write the innovation papers sustainably. From the infrastructure to the high-tech field the new simulation will become an eternal original source, thereby, we must pay more attention to its education route special in graduate thesis, maybe after some years the achievement derived from it will be created with initial innovation eyes.

3. Conclusions

The GDP (gross domestic product) will affect our country level and quality that may change our life style because the high-technique product enters our daily life every a second. We should appreciate the engineers and experts to take out new technology for us to share due to combining many high-techniques software skill to make the complete product more advancement and industrialization that may destroy the traditional economy eventually. The renewable energy like photovoltaic generator, wind turbine one, nuclear generator, hydrogen fuel & carbon one etc. new source one will be exploited by us continually to exhibit its power in front of public. On the other hand, the heat-supplier will be regulated by one house in a building with increasing and decreasing button completing electric releasing role. In the developed country it is essential function, so if you go out to let the heat decrease and when you turn back making it to increase room temperature for the sake of maintaining a normal situation in winter. Thereby, the electric consumption will retain in a high level and capacity. The new electric generator may be used from the nature renewable source with green and low carbon fuel atmosphere like photo, wind, nuclear pile, hydraulic & carbon one. Thereby, the high GDP is about to be created by our continual endeavour with those renewable resource and following machinery making course by our scientist & engineers. Hence, the entire industrial chains and supplied chain special in those down-stream firms because they will assemble all the supplied parts to one mature & complete equipment to transfer all the necessary places like sand dune, seaside & hills. With increasing those equipment by factory the employment-rate is to be incremented largely whose role can exhibit in the entire new energy transformation ratio. At end, the goods will be created large volume to transport other nations so as to increment the foreign trade activities for the sake of transforming into the foreign dollars with more capital reserve which can buy the essential goods lacking of producing in domestic market necessarily. At the end, the educated talents like university graduates will be recruited to work in different divisions in order to communicate each other experiences to reach a good circulation which can help companies to finish the useful advice transformation and adopt new innovation ones sustainably.

Ethic Declarations

The authors declared that there were not conflicts of interest.

Funding

The paper was supported by the Korea Science & Engineering Funding (KSEF) at the granted No 96-0300-11-01-03, under the Specific Basis Research Program.
