ABSTRACT

The GDP (gross domestic product) will affect our country level and quality that may change our life style because the high-technique product enters our daily life every a second. We should appreciate the engineers and experts to take out new technology for us to share due to combining many high-techniques software skill to make the complete product more advancement and industrialization that may destroy the traditional economy eventually. The renewable energy like photovoltaic generator, wind turbine one, nuclear generator, hydrogen fuel & carbon one etc. new source one will be exploited by us continually to exhibit its power in front of public. On the other hand, the heat-supplier will be regulated by one house in a building with increasing and decreasing button completing electric releasing role. In the developed country it is essential function, so if you go out to let the heat decrease and when you turn back making it to increase room temperature for the sake of maintaining a normal situation in winter. Thereby, the electric consumption will retain in a high level and capacity. The new electric generator may be used from the nature renewable source with green and low carbon fuel atmosphere like photo, wind, nuclear pile, hydraulic & carbon one. Thereby, the high GDP is about to be created by our continual endeavour with those renewable resource and following machinery making course by our scientist & engineers. Hence, the entire industrial chains and supplied chain special in those down-stream firms because they will assemble all the supplied parts to one mature & complete equipment to transfer all the necessary places like sand dune, seaside & hills. With increasing those equipment by factory the employment-rate is to be incremented largely whose role can exhibit in the entire new energy transformation ratio. At end, the goods will be created large volume to transport other nations so as to increment the foreign trade activities for the sake of transforming into the foreign dollars with more capital reserve which can buy the essential goods lacking of producing in domestic market necessarily. In the end, the educated talents like university graduates will be recruited to work in different divisions in order to communicate each other experiences to reach a good circulation which can help companies to finish the useful advice transformation and adopt new innovation ones sustainably.

KEY WORDS: Reviving the Tianjin & Qingdao etc. Chinese cities GDP, China new energy motor delivery amounts, Asian military top ones analysis, by sustainability, an innovated searching

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R & D dept(research & development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~29]

2. Discussions

2.1 Tianjin & Qingdao etc. Chinese cities GDP analysis

The Tianjin & Qingdao etc, Chinese cities GDP value changes might indicate 2.8~11.2 billion yuan by Changsa city~Tianjin one correspondingly in 1981 according to Figure 1 to exhibit the latter Tianjin city forwards economic momentum. In contrast, the Qingdao one remained the second position with 6.3 billion yuan then.

Figure 1 Tianjin & Qingdao etc. Chinese cities GDP value changes. [1]

Furthermore, the Tianjin & Qingdao etc, Chinese cities GDP value changes might indicate 2.2~10 billion yuan by Changsa city~Tianjin one correspondingly in 1979 according to Figure 2 to exhibit the latter Tianjin city forwards economic momentum. In contrast, the Qingdao one remained the second position with 5 billion yuan then.

Figure 2 Tianjin & Qingdao etc. Chinese cities GDP value changes I. [1]

Furthermore, the Tianjin & Qingdao etc, Chinese cities GDP y-y value changes might indicate 11.8%~6% by Changsa city~Tianjin one correspondingly in 1981 according to Figure 3 to exhibit the former Changsa city forwards economic momentum. In contrast, the Qingdao & Ningbo ones retained the second & third position with around 13% then.

Figure 3 Tianjin & Qingdao etc. Chinese cities GDP y-y value

changes. [1]

2.2 China new energy motor delivery amounts in July, 2026

The China new energy motor delivery amount might exhibit 93~30 thousand by Leapmotor~Erve Auto correspondingly in June, 2026 according to the Figure 4 to indicate the former Leapmotor forwards delivery amount. The compared with May was to attain 10%~12% by them accordingly expressed the Xiaopeng motor maximum developed pace with 25%.

Figure 4 China new energy motor delivery amount. [2]

2.3 Asian military top ones analysis

The Asian military top ones amount would show 12 ~0.4 billion dollars by China~Korea correspondingly in 1970 according to the Figure 5 to indicate the former China forwards military strength and

entirety with the variation around 30.5 times between them. The y-y value might show 7%~0 by them accordingly explained the former China upwards developed pace while the India retained 2 billion dollars and most 11% developed pace then.

Figure 5 Asian military top ones amount. [3]

2.4 Stock changes

The table 1 showed the stocks raising rate. From it the raising rate changed from -2.4%~3.2% by <Xin Fengguang>~<Deguan Xincal> correspondingly according to Table 1 to indicate higher raising rate with 4.8% whilst the <Xin Fengguang> remained the least minus one.

Table 1 The stocks price raising rate. [4]

Names	Price, yuan	Raising rate, %	Names	Price, yuan	Raising rate, %
Xin Fengguang	86.3	-2.4	Niuwei Shukong	14.2	4.8
Shifang Photovoltaic	64.9	-1.2	Weichuang Electricity	54	3.2
Jimi Technology	65.9	2.1	Deguan Xincal	18.5	3.2

Furthermore, the Tianjin & Qingdao etc, Chinese cities GDP y-y value changes might indicate 4%~16% by Changsa city~Tianjin one correspondingly in 1984 according to Figure 3 to exhibit the latter Tianjin city forwards economic momentum. In contrast, the Qingdao one remained the second position with 8% then.

In the summary, the reasonable population who had a good education in school and university will create the high-technique upward dynamic in later company life for creating research and development capacity continually. We should carefully cultivate their education with experiment and theoretical deduction to solve some easy and middle difficult mathematical modeling and simulation defined a certain condition by some parameters that may be regulated variation ones to gain the a series of achievement with regards to the each aspect matter. We also should educate the graduate to write the thesis papers with bachelor, master & PhD degree that may be a best proof to process the simulation and subsidiary experiment if possible. Then he may widen the views that may bring out the new vision to write the innovation papers sustainably. From the infrastructure to the high-tech field the new

simulation will become an eternal original source, thereby, we must pay more attention to its education route special in graduate thesis, maybe after some years the achievement derived from it will be created with initial innovation eyes.

3. Conclusions

The GDP(gross domestic product) will affect our country level and quality that may change our life style because the high-technique product enters our daily life every a second. We should appreciate the engineers and experts to take out new technology for us to share due to combining many high-techniques software skill to make the complete product more advancement and industrialization that may destroy the traditional economy eventually. The renewable energy like photovoltaic generator, wind turbine one, nuclear generator, hydrogen fuel & carbon one etc. new source one will be exploited by us continually to exhibit its power in front of public. On the other hand, the heat-supplier will be regulated by one house in a building with increasing and decreasing button completing electric releasing role. In the developed country it is essential function, so if you go out to let the heat decrease and when you turn back making it to

increase room temperature for the sake of maintaining a normal situation in winter. Thereby, the electric consumption will retain in a high level and capacity. The new electric generator may be used from the nature renewable source with green and low carbon fuel atmosphere like photo, wind, nuclear pile, hydraulic & carbon one. Thereby, the high GDP is about to be created by our continual endeavour with those renewable resource and following machinery making course by our scientist & engineers. Hence, the entire industrial chains and supplied chain special in those down-stream firms because they will assemble all the supplied parts to one mature & complete equipment to transfer all the necessary places like sand dune, seaside & hills. With increasing those equipment by factory the employment-rate is to be incremented largely whose role can exhibit in the entire new energy transformation ratio. At end, the goods will be created large volume to transport other nations so as to increment the foreign trade activities for the sake of transforming into the foreign dollars with more capital reserve which can buy the essential goods lacking of producing in domestic market necessarily. At the end, the educated talents like university graduates will be recruited to work in different divisions in order to communicate each other experiences to reach a good circulation which can help companies to finish the useful advice transformation and adopt new innovation ones sustainably.

Ethic Declarations

The authors declared that there were not conflicts of interest.

Funding

The paper was supported by the Korea Science & Engineering Funding (KSEF) at the granted No 96-0300-11-01-03, under the Specific Basis Research Program.
