ABSTRACT

The GDP (gross domestic product) will affect our country level and quality that may change our life style because the high-technique product enters our daily life every a second. We should appreciate the engineers and experts to take out new technology for us to share due to combining many high-techniques software skill to make the complete product more advancement and industrialization that may destroy the traditional economy eventually. The renewable energy like photovoltaic generator, wind turbine one, nuclear generator, hydrogen fuel & carbon one etc. new source one will be exploited by us continually to exhibit its power in front of public. On the other hand, the heat-supplier will be regulated by one house in a building with increasing and decreasing button completing electric releasing role. In the developed country it is essential function, so if you go out to let the heat decrease and when you turn back making it to increase room temperature for the sake of maintaining a normal situation in winter. Thereby, the electric consumption will retain in a high level and capacity. The new electric generator may be used from the nature renewable source with green and low carbon fuel atmosphere like photo, wind, nuclear pile, hydraulic & carbon one. Thereby, the high GDP is about to be created by our continual endeavour with those renewable resource and following machinery making course by our scientist & engineers. Hence, the entire industrial chains and supplied chain special in those down-stream firms because they will assemble all the supplied parts to one mature & complete equipment to transfer all the necessary places like sand dune, seaside & hills. With increasing those equipment by factory the employment-rate is to be incremented largely whose role can exhibit in the entire new energy transformation ratio. At end, the goods will be created large volume to transport other nations so as to increment the foreign trade activities for the sake of transforming into the foreign dollars with more capital reserve which can buy the essential goods lacking of producing in domestic market necessarily. In the end, the educated talents like university graduates will be recruited to work in different divisions in order to communicate each other experiences to reach a good circulation which can help companies to finish the useful advice transformation and adopt new innovation ones sustainably.

KEY WORDS: Reviving the nations GDP per capita variations, Korea Taipei & HongKong GDP Changes Analysis, Behavior & Judgement, by sustainability, an innovated searching

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI (artificial intelligence) machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R & D dept (research & development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~22]

2. Discussions

2.1 Nations GDP per capita variations

The nations GDP per capita variations would show 770~4 billion dollars by Brazil ~China correspondingly in 1990 according to the Figure 4 to indicate the former Brazil prosperous economic momentum. The y-y vale might show 3.5%~22% by them exhibited the latter China forwards developed pace. In contrast, the India maintained the moderate position with amount and raising rate with 83 billion dollars and 15% growth rate accordingly.

Figure 1 Nations GDP per capita variations. [1]

2.2 Korea Taipei & HongKong GDP list

The Nations GDP per capita variations would indicate 86~442 billion dollars by Singapore~Korea(Rep) correspondingly in 1999 according to the Figure 2 to record the latter Korea(Rep) stronger economic momentum. Meanwhile, the HongKong & Taipei retained the second & third occupation with 167 & 292 billion dollars accordingly. In contrast, the value in 1967 might show 1~4 billion dollars by them accordingly to realize the latter Korea(Rep) prosperous economy momentum whilst the Taipei & HK retained 3.2% & 2.5% accordingly in 1967 with the second & third occupations.

Figure 2 Nations GDP per capita variations. [2]

The Nations GDP per capita y-y value variations would indicate 266%~342% by Singapore~Korea(Rep) correspondingly in 1967~1999 according to the Figure 3 to record the latter Korea(Rep) more upwards economic momentum than others. In contrast, the Guangdong province & Taipei retained the second & third occupation with 300% & 282% accordingly.

2.3 Introducing in the Scopus-indexed journal

Thank you for your response as to professor and researchers. Since you have replied to our invitation, we understand that you may be interested in publishing your manuscript in a Scopus-indexed journal. This is our standard response to all interested authors. Kindly read the information below carefully before replying. Special Offer will be the APC(article processing charge) will be USD 180 (Limited-Time Offer); Availability is only for the first 5 eligible submissions.To reserve your slot, please submit your manuscript within the next 24 hours. The submission terms are to confirm your submission and reserve one of the limited publication slots, a 30% advance payment of the APC is required at the time of manuscript submission. The remaining 70% is payable only after your manuscript has been accepted. Moreover, the advance payment is intended to reserve your slot and confirm your genuine intention to proceed with publication. The review and publication will be like as following. Your manuscript will undergo the journal's editorial and peer-review process; If revisions are requested, we will communicate the reviewers' comments and assist you throughout the revision process; Subject to successful review and completion of all publication requirements, the expected publication timeline is 10–15 days. [3] Thereby, we hopefully invite your contribution to our journals in time, and we are to publish your precious paper quickly.

2.4 China-eastern region GDP analysis in 2025

The China-eastern region GDP variations analysis would exhibit 1.7~5.7 billion yuan by the Wuxi city~Shanghai one correspondingly in 2025 according to the Figure 4 to realize the latter Shanghai city forwards economic momentum. In addition, the Suzhou & Hangzhou cities completed the second & third occupation following Shanghai one with 2.8 billion yuan & 2.3 billion yuan respectively.

Figure 4 China-eastern region GDP variations analysis. [4]

Moreover, the China-eastern region GDP y-y value variations analysis would exhibit 3%~5% by the Wuxi city~Shanghai one correspondingly in 2025 according to the Figure 5 to realize the latter Shanghai city forwards economic developed pace. In addition, the Nanjing~Qingdao cities completed the second occupations following Shanghai one with 5% growth pace for both.

Figure 5 China-eastern region GDP y-y variations analysis. [4]

Thereby, the high GDP is about to be created by our continual endeavour with those renewable resource and following machinery making course by our scientist & engineers. Hence, the entire industrial chains and supplied chain special in those down-stream firms because they will assemble all the supplied parts to one mature & complete equipment to transfer all the necessary places like sand dune, seaside & hills. With increasing those equipment by factory the employment-rate is to be incremented largely whose role can exhibit in the entire new energy transformation ratio. At the end, the goods will be created large volume to transport other nations so as to increment the foreign trade activities for the sake of transforming into the foreign dollars with more capital reserve which can buy the essential goods lacking of producing in domestic market necessarily. At the end, the educated talents like university graduates will be recruited to work in different divisions in order to communicate each other experiences to reach a good circulation which can help companies to finish the useful advice transformation and adopt new innovation ones sustainably.

3. Conclusions

The reasonable population who had a good education in school and university will create the high-technique upward dynamic in later company life for creating research and development capacity continually. We should carefully cultivate their education with experiment and theoretical deduction to solve some easy and middle difficult mathematical modeling and simulation defined a certain condition by some parameters that may be regulated through variation ones to gain a series of achievement with regards to the each aspect matter. We also should educate the graduate to write the thesis papers with bachelor, master & PhD degree that may be a best proof to process the simulation and subsidiary experiment if possible. Then he may widen the views that may bring out the new vision to write the innovation papers sustainably. From the infrastructure to the high-tech field the new simulation will become an eternal original source. Thereby, we must pay more attention to its education route special in graduate thesis, maybe after some years the achievement derived from it will be created with initial

innovation eyes. Meanwhile, the GDP(gross domestic product) will affect our country level and quality that may change our life style because the high-technique product enters our daily life every a second. We should appreciate the engineers and experts to take out new technology for us to share due to combining many high-techniques software skill to make the complete product more advancement and industrialization that may destroy the traditional economy eventually. The renewable energy like photovoltaic generator, wind turbine one, nuclear generator, hydrogen fuel & carbon one etc. new source one will be exploited by us continually to exhibit its power in front of public. On the other hand, the heat-supplier will be regulated by one house in a building with increasing and decreasing button completing electric releasing role. In the developed country it is essential function, so if you go out to let the heat decrease and when you turn back making it to increase room temperature for the sake of maintaining a normal situation in winter. Thereby, the electric consumption will retain in a high level and capacity. The new electric generator may be used from the nature renewable source with green and low carbon fuel atmosphere like photo, wind, nuclear pile, hydraulic & carbon one.

Ethic Declarations

The authors declared that there were not conflicts of interest.

Funding

This paper was supported by the Korean Science & Engineering Fund(KSEF) at the granted No 96-0300-11-01-03, under the Specific Basis Research Program.
