ABSTRACT

The GDP as an indicator may play an important role in every aspects of nation and region economic activities, so that the emphasis on it will become a necessary factor for us to evaluate continually. For example the expenditure and incoming balance which may influence the national economic activities like visiting various regions in a country would afford a higher expense booming including the restaurant eating style & buying souvenir etc. many aspects besides the double-flight-fee. Therefore, the more income will be necessary accounting for high-technique working occupation that may bring us up the enough income for us to prepare to enjoy a travel happiness. So that the automotive as an advanced equipment is to wield its high-expenditure type product whose meaning exceed the limitation to develop the industrial field into the artificial intelligence technique by assembling autonomous driving software that improves the auto-security so as to avoid the risky occasion for us to attain the securest level during driving the advanced auto with it. Generally, the second-industrial reformation will include those high-technique performance vehicle like advance auto-controlling part, artificial intelligence software and hardware, high performance rechargeable electrical-battery & controlling-electrical systems etc. As a low contamination battery high-tech skill the motor product in vehicle and robot will welcome a promise future necessarily. The renewable energy transformation will give us more working chances from the university & college, thereby the necessary knowledge should be mastered by our engineers whose role lies in transform the ideal theoretic principle into the practical sample and launch product in the end. So that the more graduates from all aspects of society can create the more power for them to explore the mysterious electric and electronic world, meantime they may regulate some direction forming interdisciplinary subjects for creating the fringe subject potential force for our scientist and experts to wield directly from the published papers in high-impact-factor journals that may describe detailing experiment and theoretic method and performances for the sake of finding new principle and phenomena from the chemical reviews. Therein the more high-quality & high-level papers have to pass the all of lounges to analyze the sample performance like simulation course with every point in solid. In addition, the limited problem as a strange substance met in front of us, and the same performance with various method has to be created according to the calculation and experiment one that will puzzle our continuous study, which should be known by our authors and researchers.

KEY WORDS: Reviving the China & Europe nations gross savings, the Tang Prize analysis Behavior & Judgement, through sustainability, an innovated searching

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI (artificial intelligence) machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R & D dept (research & development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~22]

2. Discussions

The GDP as an indicator may play an important role in every aspects of nation and region economic activities, so that the emphasis on it will become a necessary factor for us to evaluate continually. For example the expenditure and incoming balance which may influence the national economic activities like visiting various regions in a country would afford a higher expense booming including the restaurant eating style & buying souvenir etc. many aspects besides the double-flight-fee. Therefore, the more income will be necessary accounting for high-technique working occupation that may bring us up the enough income for us to prepare to enjoy a travel happiness.

[23~24]

2.1 China & Europe nations gross savings analysis

The China & Europe gross savings in 1997~1999 might show 622 & 325 billion dollars by Germany & China correspondingly in 1999 according to the Figure 1 to exhibit the former Germany forwards economic momentum. The y-y value would show 5.5% & 9.4% by them accordingly indicated the Germany more upwards developed pace.

Figure 1 China & Europe gross savings in 1997~1999. [1]

Furthermore, the China & Europe gross savings in 1997~1999 might show 113 & 272 billion dollars by Russia & Britain correspondingly in 1999 according to the Figure 2 to exhibit the latter Britain forwards economic momentum. The y-y value would show 24% & -5% by them accordingly indicated the Russia forwards developed pace.

Figure 2 China & Europe gross savings in 1997~1999 I. [1]

Furthermore, the China & Europe gross savings in 1997~1999 might show 342 & 276 billion dollars by France & Italy correspondingly in 1999 according to the Figure 3 to exhibit the former France forwards economic momentum. The y-y value would show 0.4% & -3% by them accordingly indicated the France a little upwards developed pace whilst the Italy remained the minus growth.

Figure 3 China & Europe gross savings in 1997~1999 II. [1]

At the end, the China & Europe gross savings in 1993~1995 might show 346 & 304 billion dollars by France & Italy correspondingly in 1995 according to the Figure 4 to exhibit the former France forwards economic momentum. The y-y value would show 10% & 12% by them accordingly indicated their upwards developed pace.

Figure 4 China & Europe gross savings in 1993~1995. [1]

2.2 The Tang Prize

It was founded by Dr. Yin Yanliang, a Taiwanese entrepreneur, in December 2012. It is a global academic award aimed at promoting the spirit of the Tang Dynasty and Chinese culture, and encouraging people to re-examine the principle of balance for sustainable development. Regarding Dr. Yin Yanliang, many people may not be familiar with him, but the Guanghua School of Management at Peking University is well-known, right? The name "Guanghua" comes from the donation support of the Guanghua Education Foundation (the "Guanghua" symbolizes the promotion of Chinese culture), and the Guanghua Education Foundation was founded by Dr. Yin Yanliang with the core initiator being the Sinological master Nan Hongji. This donation provided significant support for the development of the school. [2] So we are to join that school for gaining the MBA (master of business administration) degree at Peking University.

2.3 Subject to the International Journal of Engineering Research and Applications

As for researcher & professors the International Journal of Engineering Research and Applications is ISO 3297:2007 certified open access and peer reviewed refereed international Journal. Moreover, the IJERA invites articles that illustrate research results,

projects, surveying works and industrial experiences that describe significant advances in the areas of Engineering, Technology, Science and Mathematics. Additionally, the INDEXING involves NASA Ads, ArXiv, ANED (American National Engineering Database), EBSCOHost, Cabell's Directory, DOAJ, NCBI (US National Library) etc. The impact factor of IJERA is 6.185 and its IC Value (By Index Copernicus) will be 5.29. The article notification: within 1 days after submission while the publication (Online) is about to be within 2 days. [3] Thereby, we are delighted to invite you submitting your contribution to us, and we are to publish it quickly after peer reviewed course.

Therein, the high GDP is about to be created by our continual endeavour with those renewable resource and following machinery making course by our scientist & engineers. Hence, the entire industrial chains and supplied chain special in those down-stream firms because they will assemble all the supplied parts to one mature & complete equipment to transfer all the necessary places like sand dune, seaside & hills. With increasing those equipment by factory the employment-rate is to be incremented largely whose role can exhibit in the entire new energy transformation ratio. At the end, the goods will be created large volume to transport other nations so as to increment the foreign trade activities for the sake of transforming into the foreign dollars with more capital reserve which can buy the essential goods lacking of producing in domestic market necessarily. At the end, the educated talents like university graduates will be recruited to work in different divisions in order to communicate each other experiences to reach a good circulation which can help companies to finish the useful advice transformation and adopt new innovation ones sustainably.

3. Conclusions

The reasonable population who had a good education in school and university will create the high-technique upward dynamic in later company life for creating research and development capacity continually. We should carefully cultivate their education with experiment and theoretical deduction to solve some easy and middle difficult mathematical modeling and simulation defined a certain condition by some parameters that may be regulated through variation ones to gain a series of achievement with regards to the each aspect matter. We also should educate the graduate to write the thesis papers with bachelor, master & PhD degree that may be a best proof to process the simulation and subsidiary experiment if possible. Then he may widen the views that may bring out the new vision to write the innovation papers sustainably. From the infrastructure to the high-tech field the new simulation will become an eternal original source. Thereby, we must pay more attention to its education route special in graduate thesis, maybe after some years the achievement derived from it will be created with initial innovation eyes. Meanwhile, the GDP (gross domestic product) will affect our country level and quality that may change our life style because the high-technique product enters our daily life every a second. We should appreciate the engineers and experts to take out new technology for us to share due to combining many high-techniques software skill to make the complete product more advancement and industrialization that may destroy the traditional economy eventually. The renewable energy like photovoltaic generator, wind turbine one, nuclear generator, hydrogen fuel & carbon one etc. new source one will be exploited by us continually to exhibit its power in front of public. On the other hand, the heat-supplier will be regulated by one house in a building with increasing and decreasing button completing electric releasing role. In the developed country it is essential function, so if you go out to let the

heat decrease and when you turn back making it to increase room temperature for the sake of maintaining a normal situation in winter. Thereby, the electric consumption will retain in a high level and capacity. The new electric generator may be used from the nature renewable source with green and low carbon fuel atmosphere like photo, wind, nuclear pile, hydraulic & carbon one.

Funding

This paper was supported by the Korean Science & Engineering Fund(KSEF) at the granted No 96-0300-11-01-03, under the Specific Basis Research Program.

Ethic Declarations

The authors declared that there were not conflicts of interest.
