ABSTRACT

The GDP(gross domestic product) is to be enhanced by us due to promoting its usefulness in our many aspects like expenditure incoming and leisure entertainment depended on our individual interesting that may increase our happiness and healthy curing & caring bad status like in hospital if we get catch cold etc.. Therefore, we need to earn money from our working occupation continuously like company school & investment where the salary per month is obtained by us so as to maintain our daily and heavily expense. We should accept the entertainment influence to our mood control with calming down so we often go to restaurant and hotel to spend leisure time to our bodies due to its recovering our body & heart even the spiritual health. Therefore, we need more money to live advanced one place to pass our leisure time with clean room and good cuisine besides retaining good sleep after watching fashion clothes too. The expenditure may bring up new tendency that helps us to fill up the normal and positive mood to work then due to obtaining higher GDP value. The unit that will make us to be rich-men is really hard and difficult task for us to learn and use the reasonable course to make the work with becoming interesting place to go almost five days one week. We should learn and upgrade new knowledge and technique skill in order to make it more achievement by our endeavour and insistence. All of our behavior and judgement can make the live more beneficial and make more money with some prize sometimes monthly and yearly. With regards to welcoming new world of artificial intelligence machine like auto-vendors that includes the automatic composition inside its internal-structure which makes our buying behavior more preciously, quickly and conveniently like payment action by visiting one face. We should continue to search and develop many of them applied to the current leisure occasions for us to enjoy enough through buying its goods like many kinds of the cigarette & beers in visible place in hospital roadside & community. Therefore, the sell & buy actions may let us fill with enough goods with quickly transacting course than human being because we just scan its two-dimensions bar code and determine the last payment button in monitor. So many of such AI machines have to change our daily life with less complaints and precise transformation action helped by those payment machines. On the other hand, the engineer must publish his cherish paper periodically like one paper speed within one~three months, so that there will be six~ten papers one year that may be published & peer reviewed by editors in Journal Publisher.

Certainly if there will be chances the sophisticated SCI(science cited index) &EI(engineering index) journals often are published that may influenced by the peers and may be cited by them as well if the similar theme appeared in the narration of those papers. Thereby, the enough high-technological achievement could be made by our scientists for revealing the internal attribution and finding outside our vision like quantum technique, drug compositions astronautic exploration &3-Dimensions print too.

KEY WORDS: Reviving China-eastern regions GDP analysis in 2025, Introduction to the Universal Academic and Innovative Publisher, Behavior &Judgement, by sustainability, an innovated searching

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity &making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI(artificial intelligence) machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R &D dept(research &development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~20]

2. Discussions

The GDP as an indicator may play an important role in every aspects of nation and region economic activities, so that the emphasis on it will become a necessary factor for us to evaluate continually. For example the expenditure and incoming balance which may influence the national economic activities like visiting various regions in a country would afford a higher expense booming including the restaurant eating style &buying souvenir etc. many aspects besides the double-flight-fee. Therefore, the more income will be necessary accounting for high-technique working occupation that may bring us up the enough income for us to prepare to enjoy a travel happiness. On the other hand, the industrial producing amount will enhance the working opportunities with increasing high-technique graduates and talents in others employment rate a certain degree that may raise that GDP value definitely. [21, 22]

2.1 China-eastern regions GDP analysis in 2025

The China-eastern region GDP variations y-y value analysis might indicate 3.2%~6% by Changzhou~ Fuzhou province correspondingly in 2025 according to the Figure 1 to record the latter Fuzhou city forwards economic momentum pace. Meanwhile, the Yantai one attained second y-y value with 5.5% following Fuzhou one, then the Quanzhou &Hefei city gained the 5.2% increasing rate occupied the third.&fourth ones accordingly.

Figure 1 China-eastern region GDP variations analysis. [1]

Furthermore, the China-eastern region GDP variations analysis might indicate 1~1.5 billion yuan by Changzhou~ Fuzhou province correspondingly in 2025 according to the Figure 2 to record the latter Fuzhou city forwards economic momentum. Meanwhile, the Hefei &Ji'nan city gained the 1.4 billion yuan increasing rate occupied the second &third ones accordingly.

Figure 2 China-eastern region GDP y-y variations analysis. [1]

Furthermore, the China-eastern region GDP variations analysis might indicate 814~1,021 billion yuan by Nanchang~ Wenzhou province correspondingly in 2025 according to the Figure 3 to record the latter Wenzhou city forwards economic momentum. Meanwhile, the Xuzhou city gained the 996 billion yuan increasing rate occupied the second ones then.

Figure 3 China-eastern region GDP variations analysis I. [1]

At the end, the China-eastern region GDP y-y value variations analysis might indicate 4%~5% by Nanchang~ Wenzhou province correspondingly in 2025 according to the Figure 4 to record the latter Fuzhou city forwards economic momentum pace. Meanwhile, the Shaoxing city gained the 7% increasing rate occupied the first one then.

Figure 4 China-eastern region GDP y-y variations analysis I. [1]

2.2 China &EU Nations Industrial strength analysis

The China &EU industrial strength analysis might exhibit 708~336 billion dollars by China~USA correspondingly in 2002 according to the Figure 5 to realize the China forwards economic momentum. Additionally, the y-y value would exhibit around 13.5% by all of them indicated their forwards developed step while the Germany remained the lowest 12.5% then.

Figure 5 China &EU industrial strength analysis. [2]

2.3 Introduction to the Universal Academic and Innovative Publisher

Our aims and scope is to be one that the Universal Academic and Innovative Publisher works with an intention to comprehensively cover the frontier of progression in scientific fields. The mission of Universal Academic and Innovative Publisher is to contribute to advancing knowledge by promoting quality research. Our ultimate aim is to publish quality peer reviewed all kinds of works in all kinds of subjects such as a Social Science, Management, Humanities, General Science, Medical and Healthcare, Engineering Science, etc. We strive with a mission to proliferate superiority knowledge amongst the readers in this fast growing scientific research world. Moreover, our mission will indicate to promote the interests and growth of scientists, circulate academic awareness and publish high quality research while providing our journals free of charge. Our journals are fully open access where researchers and readers have free and limited access to the full text of our quality articles without subscription or price barriers. At the end, the vision may be that the journals is to provide an academic platform to scholars all over the world to publish their novel, original, empirical and high quality research work. Therefore, we are delighted to invite your contribution to us, we are about to publish your cherish one in time after passing peer-reviewed course. [3]

3. Conclusions

The GDP will affect our country level and quality that may change our life style because the high-technique product enters our daily life every a second. We should appreciate the engineers and experts to take out new technology for us to share due to combining many high-techniques software skill to make the complete product more advancement and industrialization that may destroy the traditional economy eventually. The renewable energy like photovoltaic generator, wind turbine one, nuclear generator, hydrogen fuel & carbon one etc. new source one will be exploited by us continually to exhibit its power in front of public. On the other hand, the heat-supplier will be regulated by one house in a building with increasing and decreasing button completing electric releasing role. In the developed country it is essential function, so if you go out to let the

heat decrease and when you turn back making it to increase room temperature for the sake of maintaining a normal situation in winter. Thereby, the electric consumption will retain in a high level and capacity. The new electric generator may be used from the nature renewable source with green and low carbon fuel atmosphere like photo, wind, nuclear pile, hydraulic & carbon one. Thereby, the high GDP is about to be created by our continual endeavour with those renewable resource and following machinery making course by our scientist & engineers. Hence, the entire industrial chains and supplied chain special in those down-stream firms because they will assemble all the supplied parts to one mature & complete equipment to transfer all the necessary places like sand dune, seaside & hills. With increasing those equipment by factory the employment-rate is to be incremented largely whose role can exhibit in the entire new energy transformation ratio. At end, the goods will be created large volume to transport other nations so as to increment the foreign trade activities for the sake of transforming into the foreign dollars with more capital reserve which can buy the essential goods lacking of producing in domestic market necessarily. In the end, the educated talents like university graduates will be recruited to work in different divisions in order to communicate each other experiences to reach a good circulation which can help companies to finish the useful advice transformation and adopt new innovation ones sustainably.

Ethic Declarations

The authors declared that there were not conflicts of interest.
